DETAILED ACTION

Allowable Subject Matter

Claims 1-31 are allowed.

In regard to independent claim 1, while the prior art of record disclose of an active noise control system for controlling noise produced by a noise source, said system comprising: an acoustic sensor to sense a noise pattern and to produce a noise signal corresponding to the sensed noise pattern; an acoustic transducer to produce a noise destructive pattern based on said predicted noise signal, wherein the noise destructive pattern has a non-linear relationship to the noise pattern sensed by the acoustic sensor.

However, none of the prior art of record disclose of the specific wherein an estimator to produce a predicted noise signal by applying a non-linear estimation function to said noise signal wherein the predicted noise signal includes an estimation of a predicted sample of the noise signal which is successive to a current sample of the noise signal and wherein the estimator is to estimate the predicted sample by applying the estimation function to the current sample and to one or more samples preceding the current sample of the noise signal.

In regard to independent claim 18, while the prior art of record disclose of an active noise control system for controlling a noise produced by a noise source, said system comprising: a primary acoustic sensor to sense a noise pattern and to produce a

corresponding primary noise signal; at least one secondary acoustic sensor to sense a residual noise pattern and to produce at least one secondary noise signal corresponding to the residual noise pattern sensed by said at least one secondary acoustic sensor, respectively, wherein said at least one secondary acoustic sensor is separated from said noise source by a distance larger than a distance between said primary acoustic sensor and said noise source; and a controller functionally associated with an acoustic transducer and at least one estimator to produce a predicted noise signal, wherein the predicted noise signal includes an estimation of a predicted sample of at least one sampled signal of the primary noise signal and the secondary noise signal and wherein said controller is adapted to produce a noise destructive pattern based on said primary noise signal and said at least one secondary noise signal and said predicted noise signal, and wherein the noise destructive pattern produced by the controller has a non-linear relationship to the noise pattern sensed by the primary acoustic sensor.

However, none of the prior art of record disclose of the specific wherein the predicted noise signal includes an estimation of a predicted sample of at least one sampled signal of the primary noise signal and the secondary noise signal and which is successive to a current sample of the sampled signal, and wherein the estimator is to estimate the predicted sample by applying at least one non-linear estimation function to the current sample and to one or more samples preceding the current sample of the sampled signal.
